

DR Compliance

There may be circumstances when backing up company data is not optional.

There may be a compliance requirement to have a disaster recovery plan for business continuity or a requirement to keep certain data for a set period of time.

You may have a contract with your clients which stipulates that you must be back up and running again within a set timeframe.

Backup Systems can help by playing an integral role in any plan to minimise business downtime.

Critical business data can be protected securely offsite so that in the event of flood, fire, theft or other disasters you can be up and running again in the shortest possible time.

All data is encrypted to a very high standard before it leaves your premises. This ensures that only you and authorised staff can access it - even Backup Systems staff will not be able to decrypt your sensitive data.

It may be a legal requirement to archive your data for long periods of time, but still have immediate access to it. Backup Systems can tailor the system to you meet these requirements.

Crucially, the system is more than just a backup - it is also an archive.

Every version of every file uploaded to our server is stored and immediately retrievable via a secure web portal.

The files cannot be altered, so it is possible to see the exact state of a file at a given point in time. File revisions are kept for 1 year by default but much longer given the requirement.

Within an agreed timeframe, your data can be delivered anywhere ensuring your business has the best possible chance to survive.
