

WHAT'S NEW AND COOL? - WebMarshal 2006

WebMarshal™ 2006

Marshal is pleased to announce the release of WebMarshal 2006. This latest release offers real security against emerging Web-browsing threats such as phishing and spyware.

An updated WebMarshal 2006 Console makes it easier to find what you are looking for.

Maintaining PestPatrol for Marshal is simple via an easy to use update log.

WebMarshal 2006 adds significant new security and protection features for corporate Internet users. Addressing issues such as phishing, spyware and viruses, WebMarshal 2006 provides a truly integrated solution. WebMarshal 2006 allows you to control employee access to inappropriate content, manage employee's personal Internet use whilst securing and protecting your organization against, viruses, spyware and other forms of malicious code.

NEW FEATURES IN WEBMARSHAL 2006:

- Third-party anti-spyware support - enhanced protection against spyware via integration with leading third-party anti-spyware solutions.
- Protection against phishing attacks – URLEnsor provides real-time URL blacklist look-ups against known spam and phishing websites.
- Updated default policies – supplied policies have been enhanced to improve accuracy and efficiency.
- Support for text-based URL lists – compliment your subscribed URL filtering list with free, externally provided lists or specialty lists for education, industry, etc.
- Support for multiple URL filtering lists – use one or more URL filtering lists for increased coverage.
- Updated support for third-party anti-virus solutions – AV support has been updated to provide for the latest solutions from Marshal's anti-virus partners.
- HTTP 1.1 support for newer browsers – supports the latest web browsers with native HTTP 1.1

FEATURES AND BENEFITS EXPLAINED

WebMarshal 2006 provides an impressive list of new features - but what do they actually mean for your business?

SPYWARE | Third-Party Anti-Spyware Support

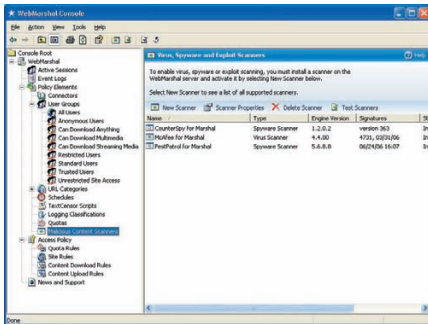

WebMarshal 2006 now provides direct support for third-party anti-spyware scanning solutions. WebMarshal 2006 supports two leading anti-spyware options:

- Counterspy by Sunbelt Software
- PestPatrol by CA

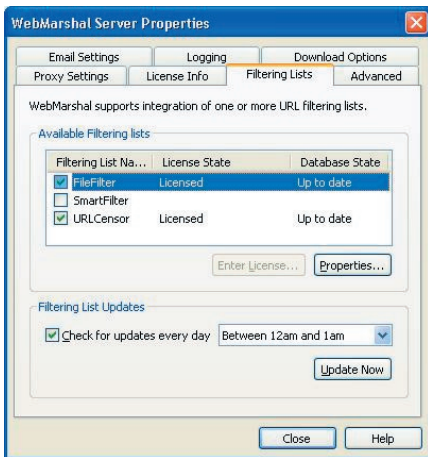

CounterSpy and PestPatrol integrate with WebMarshal just as anti-virus scanners do. No special measures are required. You simply use the default WebMarshal policies with your preferred anti-spyware product enabled and WebMarshal will scan files in real-time as users browse. Any detected spyware will be blocked immediately by WebMarshal and quarantined at the gateway; before it is passed to a users' PC. WebMarshal 2006 provides centralized security at the point of entry to your

MARSHAL™
Secure. Protect. Comply.

WHAT'S NEW AND COOL? - WebMarshal 2006

The process to install and configure the new CounterSpy and PestPatrol spyware scanners is as intuitive and familiar as using an Anti-Virus scanner with WebMarshal.

Using multiple URL filtering lists is very easy via the WebMarshal Server Properties tab.

organization, ensuring that malicious code is not able to infect individual PCs or your trusted network.

Anti-spyware scanning does not just work on inbound traffic, but outbound traffic as well. This can help ensure that your company is not held liable if one of your employees uses company assets to infect others (such as sending spyware via webmail accounts from their office computer).

PHISHING & SPAM | URLCensor

MailMarshal SMTP 2006 introduced a new anti-spam and anti-phishing feature called URLCensor. WebMarshal 2006 also now supports URLCensor to protect users against accessing websites associated with phishing or spam. URLCensor works by examining URLs and referencing these URLs against an externally maintained database of known phishing and spam websites called SURBL (Spam URL Black Lists).

In MailMarshal, URLCensor is used to detect and block unwanted emails. In WebMarshal, URLCensor is used to block browsing access to these kinds of websites. This is highly useful because emails sent to webmail accounts such as Hotmail and Gmail may contain links to phishing sites that MailMarshal does not scan. Employees may inadvertently be lured onto these sites when checking their webmail accounts at work but will still be protected by WebMarshal.

EASE-OF-USE | Default Policy Update

WebMarshal provides an extensive array of default policies and classification systems. WebMarshal 2006 features a complete refresh of the default policy configuration along with revised classification TextCensor scripts. This update improves WebMarshal's ease-of-use and initial set-up process as well as making WebMarshal more relevant and efficient in managing employee Internet activity. The latest policy update also includes everything you need to utilize the latest features and enhancements available in WebMarshal 2006. New TextCensor scripts target phishing and scam websites as well as blogs and online auctions.

EASE-OF-USE & ROI | Text-Based URL Filtering Support

WebMarshal 2006 now supports the use of free or low cost URL filtering lists available on the Internet from third-party services. These URL lists offer industry specific categories or can provide a low cost starting point for customers who prefer not to use full, paid URL filtering list subscriptions. These lists can be downloaded as plain text files and then loaded into WebMarshal and applied directly to browsing policies. You can also import industry specific lists such as whitelists for education or healthcare providers.

SECURITY | Multiple URL Filtering List Support

WebMarshal 2006 supports the use of multiple, independent URL filtering lists. You can choose to run two or more separate URL lists together for increased coverage and security. Alternatively, you can subscribe to a primary URL filtering list provider and compliment your primary list with a targeted secondary list for your specific industry needs.

WHAT'S NEW AND COOL? - WebMarshal 2006

Marshal will shortly be adding support for an additional subscription URL filtering list option. With multiple URL filtering lists enabled, you will be able to run both lists simultaneously with separated logging classifications. This is extremely useful for evaluation purposes as you will be able to trial both filtering list options together and then run reports on which list is the most accurate or efficient. You will then be able to make an informed cost benefit analysis decision and choose the filtering list option that is right for you.

ANTI-VIRUS | Updated Third-Party Anti-Virus Support

WebMarshal 2006 now provides the latest anti-virus scanner support for some of the world's leading branding of anti-virus. This includes the new Norman "Sandbox" functionality provided in MailMarshal SMTP 2006. Support for the latest anti-virus scanners allows you to choose to run your preferred virus scanning solution with WebMarshal. You can also choose to run multiple anti-virus scanners with WebMarshal for added protection.

STANDARDS & PROTOCOLS | HTTP 1.1 Support

WebMarshal 2006 supports the latest crop of Internet browsers with native HTTP 1.1 protocol support. Browsers such as Internet Explorer 7.0 and Mozilla Firefox support the new HTTP 1.1 standard. WebMarshal 2006 allows your users to browse using the latest Internet browsers with improved security and functionality.

UPGRADING

Existing WebMarshal customers with current maintenance agreements may upgrade to WebMarshal 2006 at no additional charge. If you are using an earlier version, we recommend upgrading to take advantage of the new features and security benefits offered by WebMarshal 2006.

TECHNICAL SUPPORT

The procedure for upgrading your WebMarshal server is documented in the official User Guide. If you require assistance during your upgrade (and you have a current maintenance agreement) please don't hesitate to contact your local Technical Support representative via our website – www.marshal.com

If you have any suggestions or requests for our next version, we would love to hear them. Please let your Marshal technical support or sales representative know what you would like to see added.
