

Microsoft Secure Score

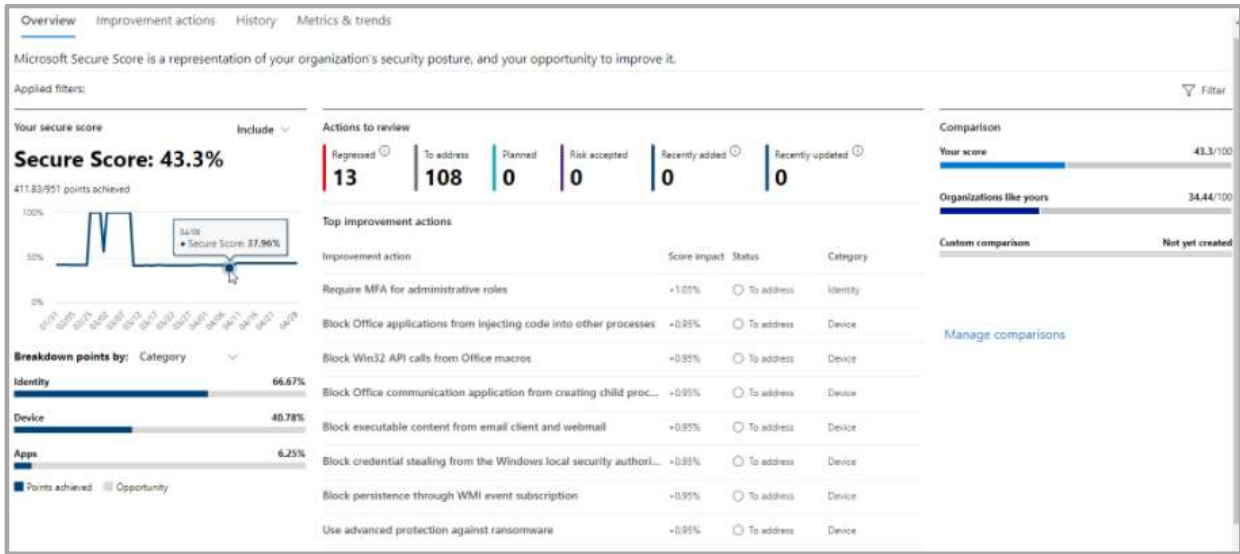

Introducing the Microsoft 'Secure Score' Review service

With recent circumstances accelerating many companies' migration to the cloud, prioritisation of remote productivity has left IT teams little time to appropriately address security concerns inherent in making company resources accessible over the internet. Our Microsoft Secure Score Review service aims to help IT Teams catch up on security in Microsoft's cloud, and provide customised prioritisation on what measures most benefit the company.

Identifying security gaps

The service aims to deliver an executive report detailing where a company's Microsoft cloud estate is most vulnerable to the current threat landscape, and offer prioritised advice on remediation, mitigation, and resolution.

Filling a resource & expertise gap

The Score will be analysed by an experienced and qualified security engineer, holding a minimum of the Cyber industry benchmark CISSP qualification (or equivalent) and holding the NCSC (National Cyber Security Centre) Cyber Essentials assessor status. This experience and these skills are brought to bear when reviewing your score, bringing real-world best practices and pragmatic advice, with the foremost objective of reducing risk to your organisation as you embrace the cloud & Microsoft.

Products included in Secure Score

Currently there are recommendations for the following products:

- Microsoft 365 (including Exchange Online)
- Azure Active Directory
- Microsoft Defender for Endpoint
- Microsoft Defender for Identity
- Cloud App Security
- Microsoft Teams
