What is a VOIP Security Assessment?

A Voice over IP (VOIP) Security Assessment is a manual assessment of the security of your VOIP telephony infrastructure. Expert security consultants will check the configuration of your VOIP infrastructure to ensure that your systems are not exposed to attack from the internet.

Why should I have a VOIP Security Assessment?

VOIP brings both cost and functionality benefits to an organisation, enabling the integration of IT and Telecoms systems, the use of a shared infrastructure, and external Internet-based services such as support for Skype and teleconferencing. However, these benefits come with potential security risks, notably:

- Unauthorised access to recorded messages
- Unauthorised use of phone systems by people outside the organisation
- Unauthorised access to IT systems via the VOIP network.

VOIP systems with Internet connections are an attractive target for unauthorised access to make "free" phone calls which can potentially result in large telephone charges for the victim.

A VOIP Security Assessment will identify any vulnerabilities in your VOIP system to reduce the risk of financial loss or unauthorised access to your phone or IT systems.

Why should I use Activity?

Activity is recognised as a leading penetration test specialist in the UK. We invest in the training and development of our security experts ensuring that you benefit from the best security advice available.

We are members of CREST – the UK industry body for penetration testing companies, as well as being recognised by HM Government for public sector penetration testing by being members of the CESG CHECK scheme. Membership of both schemes provides you with independent confirmation of the quality and professionalism of our services.

What do I get?

Our experts will remotely test the security of your VOIP system to identify any known security vulnerabilities. We will not perform any "denial of service" testing, but will report any vulnerability to such attacks that we find.

Any significant vulnerabilities will be reported to you on the day that they are found. All our findings will be presented in a written report, detailing any vulnerabilities found, our view of the risk that they pose to you, and recommended fixes to address them.

Whether you are considering your first penetration test or looking to review current providers, we can help: contact us to arrange a Service Review Call to understand your specific requirements and answer any questions you may have; we can then formulate a proposal for you. Please call or email your account manager.
