

ARgon uses unique Adaptive Redaction technology from Clearswift and tackles the problems caused by traditional Data Loss Prevention (DLP) solutions by automatically removing only the content which breaks policy and then sending the rest of the email and attachments onwards. This enables continuous collaboration, safe in the knowledge that critical information is protected.

DLP effectiveness is determined by the accuracy and the workflow of the product. Many DLP solutions are purchased and never deployed because they are too hard to configure or they generate too many false positives, resulting in increased operational overheads and decreased productivity through disrupted communications.

ARgon can be used in environments with no DLP solution or to augment an existing one. In both cases, ARgon removes next generation information threats from both inbound and outbound email. For those with an existing DLP solution, ARgon reduces the false positives by automatically removing the content which would cause the DLP solution to 'stop & block' the communication.

There are three key features within Adaptive Redaction that ARgon for Email utilises are:

- Data Redaction Removes visible content that breaks policy from email and attachments.
- Document Sanitization Removes document meta-data, revision history, etc.
- Structural Sanitization Removes active content embedded in received documents.

Deployment

ARgon is deployed between the email hygiene (and/or DLP) service and the internal email server.

- ARgon for Email uses standard SMTP messaging technology to enable compatibility with any email gateway solution
- The email gateway service can be provided by any vendor and located on-premise or hosted.
- The email server can be Exchange, Lotus Notes, Domino, or Groupwise.
- Proof of Value trials can use either 'Side Car' or 'In Series' deployments

Quarantine

The separation of hygiene services and Argon content inspection/remediation, allows policy breach events to be sent to:

- IT personnel - to focus on harmful viruses and malware;
- Business/audit personnel to focus on sensitive content violations.

About Clearswift

Clearswift is trusted by organizations globally to protect their critical information, giving them the freedom to securely collaborate and drive business growth. Our unique technology supports a straightforward and 'adaptive' data loss prevention solution, avoiding the risk of business interruption and enabling organizations to have 100% visibility of their critical information 100% of the time.

Clearswift operates world-wide, having regional headquarters in Europe, Asia Pacific and the United States. Clearswift has a partner network of more than 900 resellers across the globe.

Policies

Argon for Email comes with default policies to enable risk reduction immediately after installation. These default policies can then be further enhanced, if higher levels of granularity or compliance are required.

Adaptive Redaction Feature	Default Policy
Data Redaction	Remove PII and PCI from all outgoing email and documents
Document Sanitization	Remove all document properties, revision history and fast save information
Structural Sanitization	Remove all active content from incoming and outgoing documents

Authorized Release

In the case where information has been removed by Adaptive Redaction in order to prevent a policy being breached, but the information is actually required to be sent, a simple click on a link in an email to the senders' manager (or an authorized administrator, compliance officer etc.) can be enacted. Integration with Microsoft Active Directory or an LDAP service enables the solution to understand the organizational relationships to make this happen.

Reporting

A number of standard reports ship with the ARgon solution. These can be used to report on the number of emails and attachments which have had the policy applied. They can also be used in monitor mode, when no policy action is taken, to show the number of communications which would have been affected. This is typically done when the system is in trial or first deployed as part of employee education.

Feature	Benefit
Delivered either as software, virtual appliance or a physical appliance	Software and appliance can be deployed in minutes – no need for weeks of intrusive services implementation.
Hygiene service agnostic	Based on SMTP messages, ARgon works seamlessly with products from Cisco, McAfee, Symantec, Sophos, Microsoft and many others
Simple 5 step installation wizard – install and configure using default policies in minutes.	Industry-leading simplicity of purchase, implementation and administration support delivers minimal Total Cost of Ownership. Company's IP is protected and organization is able to comply with legislation quickly.
Mail server independent - Supports Exchange, GroupWise, Lotus Notes, SMTP, POP	Minimal disruption to the current operating environment whilst maintaining the customers decision to choose the most applicable email security solution for their evolving concerns
Deep content inspection	Looks for deliberately hidden content as well as inadvertent / misplaced content. Also inspects complex document construction, i.e. embedded object in Excel, nested inside a Word document.
High performance	Capable of processing many thousands of messages per hour on regular server or vSphere hosts reduces capital outlay
Cleans the violations	Doesn't stop business or productivity, but still maintains regulatory and corporate compliance
Managed by the business	Reduces the delay dealing with violations by allowing line managers to apply context to the message and then determine if it's safe to release and deliver

Key Technical Features	Benefit
Encryption	Uses standard SMTP and supports TLS for encryption
Text Redaction	Redaction of text is supported on email message bodies (text and html), MS Office Word, Excel and PowerPoint 2007+, Open Office Writer, Calc and Impress and PDF files
Document Sanitization	Document Sanitization is supported on MS Office Word, Excel and PowerPoint 2007+, Open Office Writer, Calc and Impress and PDF files
Structural Sanitization	Structural Sanitization is supported on HTML email message bodies, MS Office Word, Excel and PowerPoint 2007+, Open Office Writer, Calc and Impress and PDF files
