

PRIVILEGED ACCOUNT PASSWORD SOLUTIONS

Introducing simply indispensable privileged account password management and security

Privileged credentials represent one of your greatest security risks.

Hackers today are targeting your privileged account credentials for good reason. Once they gain access, they can advance from an initial breach, escalating their privileges and moving through your network to identify and compromise confidential information. Hijacking the privileged credentials of an authorized user, an attacker can easily blend in with legitimate traffic and be extremely difficult to detect.

- 62% of breaches result from privileged account abuse, according to IANS.
- Attackers typically remain on an organization's network 240 days before being detected, says one recent analyst report.

you stop them.**

THYCOTIC SECRET SERVER:

Your best value to assure privileged account password protection

Why hackers and malicious insiders are targeting your privileged account passwords

Privileged accounts are high-access, non-human accounts (such as Domain Admin or root) used by IT admins, developers, services, and applications that often provide unrestricted access to data, infrastructure, and systems.

- Privileged accounts exist in nearly every connected device, server, virtualization platform, operating system, database, and application throughout on premises and cloud-based datacenters.
- Your privileged accounts can easily total more than two to three times the number of your employees.
- Privileged accounts now extend beyond traditional IT infrastructures to include social media accounts, which can be misused to cause significant reputational damage to your enterprise.

“ IF YOU DON’T HAVE GOOD PRIVILEGED ACCOUNT MANAGEMENT, ATTACKERS CAN TAKE YOUR CREDENTIALS AND START ACTING LIKE A TRUSTED USER.”

**Dave Shackelford,
Cybersecurity expert at IANS**

Lack of protection one of your biggest risks

Many organizations today are especially vulnerable because they lack an automated Privileged Account Management solution and struggle to maintain manual systems for securing privileged credentials. As a result, Privileged Accounts are all too often unknown, unmanaged, and unprotected.

- Do you know how many privileged accounts you have and where they are located?
- Do you have all of your privileged accounts locked in a password vault?
- Can you easily access, manage, and change these passwords across the enterprise according to best practice policies?
- Do you have a simple and secure UI for setting up and enforcing policies to protect privileged accounts?
- Can you easily produce privileged password compliance reports?

“ OUR IT ADMINS WERE ABLE TO GET UP TO SPEED WITHIN MINUTES AND OUR CONTROL OVER PRIVILEGED ACCOUNTS IMPROVED IMMEDIATELY. BECAUSE SECRET SERVER HELPS US MANAGE SENSITIVE CREDENTIALS ACROSS PRIVILEGED ACCOUNTS, WE NO LONGER FACE THE INEFFICIENCIES AND SECURITY RISKS THAT CAN PLAGUE AN ORGANIZATION AS BIG AS OURS.”

**Michael Boeglin,
Director of Global Infrastructure – International Rescue Committee**

Thycotic, a global leader in next-generation IT security solutions, delivers an indispensable, comprehensive Privileged Account Management (PAM) solution to protect your “keys to the kingdom” from cyber-attacks and insider threats.

Unlike any other security offering, Thycotic Secret Server assures the protection of your privileged accounts while being the fastest to deploy, easiest to use, scalable enterprise-class solution offered at a competitive price.

Here’s what Secret Server can do for you:

RISKS YOU FACE

Unknown Privileged Accounts

What you don’t know can hurt you.

WHAT WE DO

Discover & Store Privileged Accounts

Automatically identify and securely store privileged accounts.

HOW YOU BENEFIT

- Easily detect all privileged accounts and store the passwords in our secure vault.
- Accomplishes in minutes what would take countless IT hours.

Unmanaged Privileged Account

Manual systems are inefficient and ineffective.

Manage & Audit Privileged Accounts

Audit, analyze, and manage privileged user and account activity.

- Automatic password rotation to manage the keys to the kingdom.
- Alerts you to abnormal use of credentials.
- Dramatically improves your security posture.

Unprotected Privileged Accounts

Dynamic, evolving IT environments require constant vigilance.

Monitor & Control Privileged Accounts

Collect, record, monitor and manage privileged activity.

- Facilitate adherence to compliance standards.
- Know how your privileged accounts are being used and deter abuse.
- Provide full view to your SOC with SIEM integration of privileged account use.
- Non-repudiation evidence for auditors through active recording & monitoring.

THYCOTIC SECRET SERVER:

All-in-one comprehensive Privileged Account Management solution

There's no need to spend your IT budget dollars on expensive, complex, multi-module privileged account management solutions when you can get all-in-one, comprehensive security and management in one simple solution.

See for yourself why Thycotic Secret Server deserves to be on your short list with these key benefits:

Simply Secure—Multiple layers of built-in security with easy access management for IT admins, robust segregation of role-based duties, and military-grade AES 256 bit encryption.

Highly Scalable—Supports large-scale distributed environments, all major OS, DB, apps, hypervisors, network devices, and security appliances, for on premise and cloud.

Always Available—Delivers high availability disaster recovery options, as well as hot backups, database mirroring, and our unique unlimited admin mode for “break-the-glass” scenarios.

Readily Customizable—Easy to customize without any need to spend time or money to hire expensive consultants.

Faster & Easier—Software installs in minutes, is easy to use and flexible so you can get tasks done with minimal effort.

Auditable Too—Out-of-the-box and custom reports satisfy security regulations with minimal effort.
